AudialHub Lion Updater

"I never thought I'd be regretful of all my past success, but some stupid number one hit single has got me in this mess."
— Barenaked Ladies, Box Set, Gordon, 1992

"So please don't take it to heart when I say 'can we start to spend time apart?' But frankly my dear this friendship is toxic like a fox and a hound."
— Kate Miller-Heidke, I Like You Better When You're Not Around, Curiouser, 2008

"It hurts to set you free, but you'll never follow me."
— The Doors, The End, The Doors, 1967

"Oops!...I did it again. I played with your heart; got lost in the game."
— Britney Spears, Oops!...I Did It Again, Oops!...I Did It Again, 2000

What's this all about?

AudialHub was discontinued nearly three years ago (early October 2008). It continued to work through Snow Leopard, but portions began to fail in Lion. As a good-will gesture, this quick fix to restore functionality under Lion is being offered. **Full functionality and support cannot be guaranteed**, but these fixes seem to solve the showstopper issues that were keeping AudialHub from functioning.
Nobody likes to see things go. But we all have to move on sometime. Sometimes prolonging the inevitable helps, sometimes it doesn't.
If you need more time before you can part with your favorite media transcoder, I'm here to hold your hand one last time.

What do I need to know?

This updater will update AudialHub 1.07+ for compatibility with OS X 10.7 Lion. Older versions of AudialHub cannot be updated.
It will look for a program called "AudialHub". If you renamed AudialHub to something else, change it back.
If you have multiple copies of AudialHub on your computer for some reason, launch the one you want to update before running the updater.
The updater will make a backup of the original AudialHub and place it on your Desktop, just in case.

Instructions

1: Open the "AudialHub Lion Updater" application.

2: Live your life to the fullest.

Update Complete!
AudialHub's core components have now been updated to function as best as they can on Lion. I hope this keeps your favorite obsolete and unsupported program running for a little while longer.

Good luck!

[Have a nice life]
