**TECHSPANSION**  
FOR IMMEDIATE RELEASE  
06/07/06

## TECHSPANSION RELEASES VISUALHUB: THE UNIVERSAL VIDEO CONVERTER FOR MACINTOSH

An Easy-To-Use Multi-Format Video Conversion Program from the Creator of iSquint.

VisualHub allows users to convert nearly all formats of video to popular formats for playback on iPods, PSPs, DV camcorders, and DVDs. Other formats include MPEG, MP4, WMV and Flash video.

VisualHub was designed to be extremely easy to use. Based on the popular iSquint interface, VisualHub offers drag and drop ease to 9 different video formats.

Up to **18 hours** of video can be burned on a single DVD, playable in standalone DVD players. VisualHub automatically decides quality levels to fit any amount of video on one disc. Users can burn straight from the program with no extra utilities necessary.

Advanced features in VisualHub are abundant, with nearly every aspect of video processing tweakable to suit each user's needs. A built in dynamic preview can quickly show users the expected resolution and compression quality before spending time on a full conversion.

VisualHub is one of the first video conversion solutions to offer Xgrid support. Videos in a batch encode are dealt out to Macs on a personal network willing and set to help. Multiple processor Macs can also benefit from Xgrid. A combined 327fps of encoding power is possible on a Power Mac G5 Quad.

VisualHub is available immediately from <http://visualhub.net>, priced at \$23.32 USD.
