FOR IMMEDIATE RELEASE
08/01/06

TECHSPANSION RELEASES VISUALHUB 1.1

Supports conversion from DVD sources, and TiVo export among 20 other new features.

Nearly two months ago, Techspansion released VisualHub, bringing ease-of-use to converting numerous types of video to popular formats for iPods, PSPs, DV camcorders, and DVDs, along with MPEG, MP4, WMV and Flash video output.

Guided by user requests, VisualHub 1.1 features nearly 20 new and upgraded features.

Drag and drop conversion from non-encrypted DVDs and VIDEO_TS folders is now possible, behaving just like any other file in VisualHub's file queue.

Taking advantage of TiVoGoBack technology, VisualHub can now turn the TiVo into a personal media center by creating videos that can be transferred and played like any other recorded show - a Mac first.

Other new features include enhanced AutoCrop, easier conversion to PSP memory sticks, quick-access cheat codes, custom DVD titles and chapter settings, Pause/Resume capabilities, louder amplification (11), and new output formats, such as 720p and 1080i HDTV, SVCD, and Transport Streams.

VisualHub 1.1 is priced at \$23.32, and is a free upgrade for all registered users...although they are certainly welcome to pay again if they'd like.
