**TECHSPANSION**  
FOR IMMEDIATE RELEASE  
06/21/07

## TECHSPANSION RELEASES VISUALHUB 1.24

**New High-Res universal format for MP4 devices, and AppleScript Tech Preview!**

Techspanion's VisualHub has been a runaway hit with Mac users of all types, from students to video professionals to families and everyone inbetween. Even you.

The latest version of VisualHub (1.24) offers a new high resolution MP4 format that manages better widescreen picture quality in a single video file that not only plays on the iPod, but will also play on Mac OS X, Windows, Linux, iPhone, Apple TV, Xbox 360 and PS3, with a 34% jump in quality! It leapfrogs Apple's own "It's on your computer, it's on your iPod, now it's on your TV" video solution.

See <http://visualhub.net/hi-res.php> for more information and samples of this new format.

Alongside VisualHub 1.24, Techspanion released a Technology Preview of its upcoming Automation support for VisualHub, providing users for the first time with the ability to create their own AppleScripts to automatically control VisualHub and its conversions. This opens up a whole new realm of possibilities to power users.

See <http://visualhub.net/vh-automationpreview.pdf> for the Automation Primer.

VisualHub 1.24 is only \$23.32 and is a free upgrade to registered customers...although they are certainly welcome to buy more copies if they'd like.
