**TECHSPANSION**  
FOR IMMEDIATE RELEASE  
02/13/08

## TECHSPANSION RELEASES VISUALHUB 1.31 **Support for 5.1 Surround Sound on the Apple TV!**

Techspanion's VisualHub has been a runaway hit with Mac users from all over the world, from Andorra to Zambia. Video conversion has never been so easy.

The new Apple TV 2.0 software (aka "Take 2") allows for 5.1 Surround sound over HDMI and Optical outputs. Not willing to take "maintenance updates" for an answer, VisualHub has been updated to version 1.31 with support for 5.1 surround output on the Apple TV!

Video sources with 5.1 AC3 audio will have their audio track passed directly through to the finished file, and the video will be converted for optimal playback on the Apple TV.

VisualHub 1.31 is only \$23.32 and is a free upgrade to registered customers...although they are certainly welcome to buy more copies if they'd like. A free trial is also available as always.
